(a) in-jet EEC:
weight E_1E_2, angle R_L
$R_L = \theta_{12}$
jet cone, radius R
$\Delta\eta$
$\Delta\varphi$ to jet axis
(b) jet–UE pairs: x_1 in the cone, x_2 in the reference region
($v_0^{\text{jet-UE}}$ and jet–UE EEC; angle measured from the jet axis)
reference region: $0.2 < p_T < 3$ GeV/c, outside jet and perp. cones $\rightarrow [p_T]_{\text{ref}}$
perp. cone
jet cone R: $f(p_T)$
perp. cone (excluded)
x_1
$\theta(x_2) > R$
x_2
η
$\Delta\varphi$ to jet axis
