(a) EEC: Γ resolved in angle
R
EEC: one value per angle
$\Sigma^{c}_{jU}(\theta) \propto \int dp\, p\, \Gamma_1(p,\theta)$
$\Gamma_k(p,\theta)$ (schematic)
angle to jet axis θ
(b) v_0: Γ integrated over the reference region $\theta > R$
R_1
R_2
v_0 at radius R_2: $\int_{\theta>R_2} d\theta$
extra region at R_1: $R_1 < \theta < R_2$
$\Gamma_k(p,\theta)$ (schematic)
angle to jet axis θ
