connected density
$C(x_1, x_2) = \rho_2 - \rho_1\rho_1$
two angular kernels ($k = 0, 1$)
$\Gamma_k(p,\theta) = \int_{\text{cone}} dx_1\, \delta(p - p_{T,1})$
$\times \int_{\text{ref}} dx_2\, p_{T,2}^k\, \delta(\theta - \theta_2)\, C$
weight p, keep θ
jet–UE EEC (connected)
$\Sigma^c_{\text{JU}}(\theta) = \frac{1}{(p_T^{\text{jet}})^2} \int dp\, p\, \Gamma_1(p,\theta)$
signed, projected, integrate θ
numerator of $v_0^{\text{jet-UE}}(p_T)$
$\frac{1}{\bar{N}\bar{N}_{\text{ref}}} \int_{\theta > R} d\theta \left[\int_{\text{bin}} - \langle f \rangle \int_{\text{all}} \right] dp$
$\times [\Gamma_1 - \mu\, \Gamma_0](p,\theta)$
